Obrycki Designerboden GmbH realizes your creative project, with our primary competence being the development and implementation of liquid plastic coatings.

Since we are independent and not working for only one manufacturer of synthetics, we can flexibly adjust to any requirements and always offer you the best system.

In addition to the design and application of individual, seamless flooring systems, we are experienced in coating walls and furniture.

Through cooperation with leading manufacturers of synthetic systems, we are always „up to date“ and make our designs permanently unique through daily development and innovation.

design:

- choose from our wide variety of styles
- corporate design elements (like colors and logos) can be implemented
- any of our handmade floors gets its own unique Design
- choose from different sealers: matt, satin, glossy, piano lacquer
- your creativity has no bounds set

technology:

- permeable or non permeable
- about 20000 Farben available (RAL / NCS / RAL Design etc.)
- seamless
- can be applied over gaps
- installation time can be reduced by using accelerators
- can be used on parquet, carpet, (glazed) tiles, metal and steel..
- hardness and skid-resistant features are adjustable
- suitable for floor heating

care:

- easy to clean because the surface is seamless and has no pores
- can be refreshed or redesigned (other color/s etc.) in short time (about 24h)
